MEDICATION ASSISTED TREATMENT

VIRTUAL TRAINING

## Medication for Opioid Use Disorder

February 11, 2022 | 8:30 am – 11:30 am

**Continuing Education:** 3 CME

This 3-hour course may be taken as an abbreviated training for those new to prescribing buprenorphine or as a refresher for those with a waiver.

### Educational Objectives:

- Understand that opioid use disorder is a medical illness and identify differences between dependence and addiction.
- Identify the differences between medications for opioid use disorder and implement strategies to provide evidence-based effective treatments.
- Describe and address the indications, dosing algorithms, potential complications, and components of successful buprenorphine administration.
- Understand how to manage acute pain for patients with opioid use disorder.
- Understand and implement harm reduction strategies, including rationale and evidence for community naloxone distribution.
- Describe, utilize and act according to the legal and regulatory consideration related to buprenorphine prescribing.

*X-Waiver Requirement Changes: In April 2021, the Department of Health and Human Services announced that the 8-hour waiver course is no longer required for providers to apply for their DEA x-waiver to prescribe buprenorphine (up to 30 patients). This course may be taken as an abbreviated training for those new to prescribing buprenorphine or as a refresher for those with a waiver.*
